**Aliya N Husain,Louis P Dehner**

**Harper's Textbook of Pediatric Dermatology** Peter H. Hoeger,Veronica Kinsler,Albert C. Yan,Christine Bodemer,Margarita Larralde,David Luk,Vibhu Mendiratta,Diana Purvis,2019-12-04 A consummate classic with a fresh approach to pediatric dermatology Children's skin is different. Maturation affects the epidermal barrier, the cutaneous microbiome, adnexal structures, vasculature, and transcutaneous absorption of drugs. The immature skin is more susceptible to pathogens and environmental disruption. Many genetic disorders are either present at birth or manifest early in childhood. Skin diseases thus present differently in children than in adults. Pediatric dermatology has seen significant advances over the last decade, particularly in the field of molecular genetics research, which has furthered our understanding of the pathogenesis of many skin diseases and the development of new approaches to treatment. This fourth edition of the Harper classic provides state-of-the-art information on all aspects of skin disease in children. It covers the diagnosis and treatment of all conditions - both common and rare - with a consistently evidence-based approach. Existing content has been refreshed and fully updated to reflect emerging thinking and to incorporate the latest in research and clinical data - especially at the genetic level. This new fourth edition includes: Greater focus on the genetics behind skin disease, including new genes/genodermatoses, progress in genetic analysis, and stem cell transplants Increased coverage of lasers and other technologies used to treat skin disease More summary tables, learning points, tables of differential diagnosis, and clinical algorithms for diagnosis and management Additional online features, including patient information links and multiple choice questions Harper's Textbook of Pediatric Dermatology delivers crucial clinical insights and up-to-date research information that spans the breadth of the field. As the most comprehensive reference book on this subject available, this revised fourth edition will support and guide the daily practice of both dermatologists and pediatricians across the world.

**Pediatric Dermatopathology** Thuy L. Phung,Teresa S. Wright,Crystal Y. Pourciau,Bruce R. Smoller,2017-06-20 This book provides practicing pathologists, dermatologists, cutaneous oncologists and dermatopathologists with a reference textbook that reviews the clinical and histopathologic features of skin disorders that affect children, along with a discussion of the molecular pathogenesis for each disease as it is currently known. The book includes a concise discussion of the clinical presentation, as well as the histologic and, when appropriate, immunohistochemical features of each disease. The book is divided into two main sections, non-neoplastic and neoplastic skin diseases. Each section is comprised of a series of chapters organized according to histologic findings rather than by clinical classification systems. This will enable the practicing pathologist to browse chapters based upon observation of routine histologic patterns. Each chapter addresses the differential diagnoses of skin disorders with focus on salient histologic characteristics. The text is richly illustrated with over 1000 colorful clinical and histologic photographs for each of the 400 entities discussed. Pediatric Dermatopathology provides a microscope table reference for the practicing pediatric pathologist, general pathologist and dermatopathologist. Further, it will serve as a reference volume for dermatologists, pediatricians and oncologic surgeons.
