Life Traces of the Georgia Coast Anthony J. Martin, 2013 Have you ever wondered what left behind those prints and tracks on the seashore, or what made those marks or dug those holes in the dunes? *Life Traces of the Georgia Coast* is an up-close look at these traces of life and the animals and plants that made them. It tells about how the tracemakers lived and how they interacted with their environments. This is a book about ichnology (the study of such traces) and a wonderful way to learn about the behavior of organisms, living and long extinct. *Life Traces* presents an overview of the traces left by modern animals and plants in this biologically rich region; shows how life traces relate to the environments, natural history, and behaviors of their tracemakers; and applies that knowledge toward a better understanding of the fossilized traces that ancient life left in the geologic record. Augmented by illustrations of traces made by both ancient and modern organisms, the book shows how ancient trace fossils directly relate to modern traces and tracemakers, among them, insects, grasses, crabs, shorebirds, alligators, and sea turtles. The result is an aesthetically appealing and scientifically grounded book that will serve as source both for scientists and for anyone interested in the natural history of the Georgia coast.

Pictures and Tears James Elkins, 2005-08-02 This deeply personal account of emotion and vulnerability draws upon anecdotes related to individual works of art to present a chronicle of how people have shown emotion before works of art in the past.

The Ecology of a Salt Marsh L. R. Pomeroy, R. G. Wiegert, 2012-12-06 Ecologists have two long-standing ways to study large ecosystems such as lakes, forests, and salt-marsh estuaries. In the first, which G. E. Hutchinson has called the holological approach, the whole ecosystem is first studied as a black box, and its components are investigated as needed. In

the second, which Hutchinson has called the merological approach, the parts of the system are studied first, and an attempt is then made to build up the whole from them. For long-term studies, the holological approach has special advantages, since the general patterns and tentative hypotheses that are first worked out help direct attention to the components of the system which need to be studied in greater detail. In this approach, teams of investigators focus on major functions and hypotheses and thereby coordinate their independent study efforts. Thus, although there have been waves, as it were, of investigators and graduate students working on different aspects of the Georgia salt-marsh estuaries (personnel at the Marine Institute on Sapelo Island changes every few years), the emphasis on the holological approach has resulted in a highly differentiated and well-coordinated long-term study. Very briefly, the history of the salt-marsh studies can be outlined as follows. First, the general patterns of food chains and other energy flows in the marshes and creeks were worked out, and the nature of imports and exports to and from the system and its subsystems were delimited.

Corcoran Gallery of Art Corcoran Gallery of Art, Sarah Cash, Emily Dana Shapiro, Jennifer Carson, 2011 This authoritative catalogue of the Corcoran Gallery of Art's renowned collection of pre-1945 American paintings will greatly enhance scholarly and public understanding of one of the finest and most important collections of historic American art in the world. Composed of more than 600 objects dating from 1740 to 1945.

The Prism and the Rainbow Joel W. Martin, 2010-06-01 God or Darwin? It is one of the most contentious conflicts of our time. It is also completely unnecessary, according to Joel W. Martin, an evolutionary biologist and ordained elder in the Presbyterian Church USA. In this slim but powerful book, Martin argues that it is not contradictory to be a practicing, faithful Christian who accepts the science of evolution. Martin finds that much of the controversy in the United States over evolution is manufactured and predicated on a complete—and sometimes willful—misapprehension of basic science. Science and religion, he says, serve different purposes and each seeks to answer questions that the other need never address. He believes that many of the polarizing debates about evolution distract from the deeper lessons of Christianity and that literal, fundamentalist readings of the Bible require the faithful to reject not just evolution but many of science's greatest discoveries. Just as the scientific explanation of rainbows is not meant to refute the biblical rainbow story of God's promise, evolutionary theory is not a ploy to disavow the divine. Indeed, Martin shows that the majority of Christians worldwide accept the theory of evolution. He urges his fellow Christians to refuse to participate in the intellectually stifling debate over evolution and creationism/intelligent design.

U.S. Marines In Vietnam: Fighting The North Vietnamese, 1967 Maj. Gary L. Telfer, Lt.-Col. Lane Rogers, Dr. V. Keith Fleming Jr., 2016-08-09 This is the fourth volume in an operational and chronological series covering the U.S. Marine Corps' participation in the Vietnam War. This volume details the change in focus of the III Marine Amphibious Force (III MAF), which fought in South Vietnam's northernmost corps area, I Corps. This volume, like its predecessors, concentrates on

the ground war in I Corps and III MAF's perspective of the Vietnam War as an entity. It also covers the Marine Corps participation in the advisory effort, the operations of the two Special Landing Forces of the U.S. Navy's Seventh Fleet, and the services of Marines with the staff of the U.S. Military Assistance Command, Vietnam. There are additional chapters on supporting arms and logistics, and a discussion of the Marine role in Vietnam in relation to the overall American effort.

Portrait of an Island Mildred Teal,1997-10-01 When Mildred and John Teal moved to Sapelo Island, Georgia, in 1955, they stepped back in time to a virtually undeveloped landscape of salt marsh, maritime forest, freshwater ponds, sand dunes, and beaches. Over the course of a four-year stay their careful observations of the island's unique marine ecology and wonderfully varied flora and fauna became the basis for Portrait of an Island. The island's human history dates back more than four thousand years. The lure of Sapelo has drawn many to its shores, including tobacco millionaire R. J. Reynolds, who established the University of Georgia Marine Institute there in the 1950s. Surrounded by sixteen thousand acres of pristine marsh, Sapelo offers researchers and the public a rare opportunity for environmental studies. Now a state game refuge and national estuarine sanctuary, the island remains a special haven where humans and nature quietly and peacefully coexist. Portrait of an Island is essential reading for anyone who treasures tranquility.

Decapod Crustacean Phylogenetics Joel W. Martin,Keith A. Crandall,Darryl L. Felder,2016-04-19 Decapod crustaceans are of tremendous interest and importance evolutionarily, ecologically, and economically. There is no shortage of publications reflecting the wide variety of ideas and hypotheses concerning decapod phylogeny, but until recently, the world's leading decapodologists had never assembled to elucidate and discuss relationships among

The Gullah People and Their African Heritage William S. Pollitzer, 2005-11-01 The Gullah people are one of our most distinctive cultural groups. Isolated off the South Carolina-Georgia coast for nearly three centuries, the native black population of the Sea Islands has developed a vibrant way of life that remains, in many ways, as African as it is American. This landmark volume tells a multifaceted story of this venerable society, emphasizing its roots in Africa, its unique imprint on America, and current threats to its survival. With a keen sense of the limits to establishing origins and tracing adaptations, William S. Pollitzer discusses such aspects of Gullah history and culture as language, religion, family and social relationships,

music, folklore, trades and skills, and arts and crafts. Readers will learn of the indigo- and rice-growing skills that slaves taught to their masters, the echoes of an African past that are woven into baskets and stitched into quilts, the forms and phrasings that identify Gullah speech, and much more. Pollitzer also presents a wealth of data on blood composition, bone structure, disease, and other biological factors. This research not only underscores ongoing health challenges to the Gullah people but also helps to highlight their complex ties to various African peoples. Drawing on fields from archaeology and anthropology to linguistics and medicine, *The Gullah People and Their African Heritage* celebrates a remarkable people and calls on us to help protect their irreplaceable culture.
