The Invisible Man H. G. Wells,2024-05-30 A stranger with a striking appearance arrives in the small village of Bramblehurst on a cold, snowy day. His face is completely covered in bandages, with only a fake nose protruding. The villagers wonder why he is disguised, and when mysterious burglaries begin to occur, they decide to unmask the stranger. What they discover is not just a man trapped by his own creation, but a chilling reflection of the unsolvable secrets deep within human nature. *The Invisible Man* is a timeless classic that not only entertains and thrills, but also sheds light on questions of human nature and the dangers that arise when the boundaries of science are crossed. It is a captivating and thought-provoking reading experience that has challenged readers for generations to contemplate their own life choices. H. G. WELLS [1866-1946] was a British author and pioneer in the science fiction genre. His works, including *The Time Machine* and *The War of the Worlds*, delved into futuristic and societal critique themes. Wells's visionary portrayals of technology, social structures, and extraterrestrial life made him one of the most influential writers in his field and a precursor to modern science fiction.

Polymyalgia Rheumatica and Giant Cell Arteritis Jozef Rovensky,Burkhard F. Leeb,Howard Bird,Viera Štvrtinová,Richard Imrich,2010-05-06 In the present monograph, we offer current insights into polymyalgia rheumatica and giant cell arthritis. Both diseases are typical for advanced age, and their incidences increase with aging. Both diseases are a center point of interest not only for rheu- tologists, gerontologists, ophthalmologists or neurologists, but also for general prac- tioners. Early

diagnosis and rapid treatment, mainly with glucocorticoids can save one of the most precious senses-vision. Damage to other organs (heart, aorta, coronary arteries, liver, lungs, kidneys), which are supplied by the arteries affected by ischemic syndrome in the setting of giant cell arthritis, has serious consequences as well. Late diagnosis of giant cell arthritis can have fatal consequences for affected patients. It is a matter of fact that the human population is aging. Therefore, more attention has to be paid not only to diagnosis, clinical course and treatment of rheumatic diseases in elderly, but also to their genetic, immunologic, endocrinologic, chronobiologic mechanisms, and state-of-the-art diagnostic modalities. I am convinced that the interdisciplinary research of the diseases will allow us to diagnose and treat the rheumatic diseases even faster and more effectively in the future.
